PROFILE

Junior full stack developer with a stronger focus on the backend and hands-on experience across the full software development lifecycle in an enterprise consulting environment. At EY I developed features for the NH Hotels web application from requirements analysis to deployment: REST API endpoints, business logic and data access with Spring Boot and JPA, Vue components and Tridion CMS integration, as part of a Scrum team. At Itequia I co-maintained the CI/CD infrastructure on Azure DevOps Pipelines. I use generative AI daily for coding, debugging, refactoring, test writing and documentation. Also comfortable with React/TypeScript, Python, .NET and Node.js.

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, Python, C#, SQL, PHP
Frontend	Vue, React, HTML, CSS
Backend	Spring Boot, JPA/Hibernate, REST APIs, JUnit, .NET, Node.js
CI/CD and cloud	Jenkins, Azure DevOps Pipelines, Azure, Docker, Linux, Git (branches, pull requests), PowerShell, Bash
Databases	SQL, MySQL
AI tools	Generative AI assistants (Claude, ChatGPT) for coding, debugging, refactoring, testing and documentation
Methodologies	Scrum, Agile, Jira

PROFESSIONAL EXPERIENCE

Junior IT Consultant — EY **October 2025 – June 2026**
Technology Consulting · Barcelona (hybrid) · Trainee contract

- Developed new features and fixed issues in the NH Hotels web application (Spring Boot + Vue) across the full lifecycle: requirements analysis, implementation, testing and deployment.
- Backend (Spring Boot): built REST API endpoints, business logic and the data access layer with JPA/Hibernate and hand-written SQL queries.
- Frontend (Vue): extended existing components and connected them to the backend REST API; occasionally built new components and layouts.
- Integrated content managed in the Tridion CMS into the application.
- Introduced the first automated unit tests on a project with no test coverage (JUnit on the backend, frontend tests) for my own code, using generative AI to speed up test writing and reducing manual validation time.
- Deployed to the test environment through Jenkins CI/CD jobs, updating the job configuration after changes.
- Worked with Git (branches and pull requests) and Scrum sprints in Jira; wrote technical documentation and tracked tasks and deadlines.

DevOps Engineer Intern — Itequia **March 2021 – June 2022**
Barcelona · IT consultancy of around 35 people

- Co-maintained the CI/CD infrastructure: Azure DevOps Pipelines build agents on Windows virtual machines (Azure and on-premise), keeping builds and deployments running correctly.
- Automated maintenance tasks with PowerShell and Bash scripts: daily backups, clean-up of old files and SQL database maintenance.
- Handled incidents in Jira Service Management and reported in daily status meetings with management and project managers.

Data Analyst — Little Suite **February 2019 – August 2020**
Barcelona · Part-time

- Prepared Excel reports and presentations for management and clients; managed and maintained MySQL databases, ensuring data integrity and security.

EDUCATION

Higher Vocational Diploma (CFGS, EQF level 5) in Web Application Development — IFP **2024 – 2026**
Barcelona · Deployed web applications with Docker on Linux servers

Higher Vocational Diploma (CFGS, EQF level 5) in Multiplatform Application Development — IES Joan d'Àustria **2022**
Barcelona

LANGUAGES

Spanish (native) · Catalan (native) · English (advanced)
